COMBINAL | BROW LIFTING

LASH & BROW EXPERT

1st Step

Clean your customer's brows thoroughly. Use the COMBINAL Priming Lotion to prepare the brows and to cleanse them of any greasy residue with a fuzzi free cotton pad. Wet the fuzzi free cotton pad with our lotion and stroke gently over the customer's brows. Let the brows dry to move on with the next steps (use a Cold Air Dryer or Lash Dryer Air Ball Balloon for quick results).

2nd Step

Brush the brows with the Y-Tool, applicator or mascara brush, to separate them from each other and to set the brows. Apply the COMBINAL Glue from the beginning to the end of the brows and fix the hair with the Y-Tool, applicator or mascara brush. Lift the hair towards a desired position. If you want to correct the positioning, add more glue on to the correcting area and lift the hair towards a desired position. Allow the glue to dry. The glue protects the skin from the lotions. You can continue to apply the glue throughout the treatment to set the brows. The COMBINAL Glue is water-soluble. Close the adhesive well after use.

3rd Step

After positioning the brows in the desired shape, now apply the COMBINAL Brow Lifting Lotion with a dry cotton swab, lip brush or microbrush on the brows. Cover the brows from the beginning to the end with sufficient lotion from the newly opened sachet, excluding the skin around the brow area. The processing time for the COMBINAL Brow Lifting Lotion should last ca. 10 minutes or longer (max. 20 minutes) – varies on the hair thickness. After the processing time, remove the lotion thoroughly from the brows with a dry cotton swab/ a fuzzi free cotton pad without taking off the COMBINAL Glue. Please clean the preferred tool for applying the lotions afterwards or us separate tools. **Tip:** During the waiting time you can also additionally use a plastic wrap. This helps to speed up the process by trapping heat in.

4th Step

Continue to apply the COMBINAL Brow Fixing Lotion with a dry cotton swab, lip brush or microbrush on the brows. Cover the brows from the beginning to the end, excluding the skin around the brow area, just like with the COMBINAL Brow Lifting Lotion. The processing time for the COMBINAL Brow Lifting Lotion should last ca. 10 minutes or longer (max. 20 minutes) – varies on the hair thickness. After the processing time, remove the lotion thoroughly from the brows with a dry cotton swab/ a fuzzi free cotton pad. You can now use a wet, fuzzi free cotton pad to remove the COMBINAL glue. Please clean the preferred tool for applying the lotions afterwards or us separate tools. **Tip:** During the waiting time you can also additionally use a plastic wrap. This helps to speed up the process by trapping heat in.

5th Step

The brows can be tinted now. Processing time for the color is 3-6 minutes. Gently remove the tint from the brows with KERALASH 5ml. You can also use our oil-free COMBINAL Colour Cleanser.

7th Step

Use micro brushes to apply KERALASH 5ml over the brows. This nourishes and strengthens your brows.

6th Step

Start to shape your customer's brows based on their unique facial symmetry with our additional tools! Use the mapping string and ruler to create their brows' natural arches. From there, you can mark the most symmetrical brows in a breeze! Once the lines are created, pluck the eyebrows by removing only hairs beyond the lines. Use the precision scissors for an optimized shape.
